

**SYSTEM, METHOD AND ARTICLE OF MANUFACTURE FOR A
JAVA/JAVASCRIPT COMPONENT IN A MULTIMEDIA
SYNCHRONIZATION FRAMEWORK**

ABSTRACT

A system, method and article of manufacture are provided for synchronizing an event on a plurality of client apparatuses. First, a plurality of client apparatuses are connected via a network. Next, an application program is embedded on a site on the network. In use, information is requested from a server on the network utilizing the application program. Such information relates to an event to be played back simultaneously on the client apparatuses. In response to such request, a script is received for displaying the information.
